Date: 21 September 2024
Topics: OSINT Framework

Three Topics Related to Threat Intelligence

1. Threat Intelligence → Tactics, Techniques, and Procedures (TTPs): Malware Exploit TTP Database

- **Overview:**

The TTP Database is a systematic method for understanding and categorizing the behaviors of cyber adversaries. By analyzing Tactics, Techniques, and Procedures (TTPs), cybersecurity teams can detect and mitigate threats more effectively. This approach is useful for activities such as threat hunting, malware detection, and analyzing exploits.

- **Example Framework:**

The **MITRE ATT&CK Framework** is widely used, offering a detailed repository of real-world attack techniques employed by threat actors.

The screenshot shows the Exploit Database website interface. It features a sidebar with navigation icons, a header with the site logo, and a main content area with a table of exploits. The table includes columns for Date, Download status, Authentication status, Title, Type, Platform, and Author. A search bar and filter options are also visible.

Date	D	A	V	Title	Type	Platform	Author
2024-11-15				SOPanning 1.52.01 (Simple Online Planning Tool) - Remote Code Execution (RCE) (Authenticated)	WebApps	PHP	cybersploit
2024-10-01				reNgine 2.2.0 - Command Injection (Authenticated)	WebApps	Multiple	Caner Tercan
2024-10-01				openSIS 9.1 - SQLi (Authenticated)	WebApps	PHP	Devrim Diragumandan

2. Threat Intelligence → Malware Information Sharing Platform (MISP):

- **Overview:**
MISP is an open-source platform that enables sharing, storing, and correlating threat intelligence, such as indicators of compromise (IOCs) related to malware and vulnerabilities.
 - **Key Features:**
 - Threat Intelligence Sharing.
 - Automation and Integration with tools.
 - Correlation Engine to analyze relationships.
 - Taxonomy and tagging for efficient organization.
 - Community-Driven Enhancements.
 - **Use Case:**
 - Reverse Engineering: MISP supports detailed malware analysis and assists in identifying patterns and potential threats.
-

3. Threat Intelligence → Malware Patrol

- **Overview:**
Malware Patrol provides malware intelligence, threat feeds, and cybersecurity solutions to help organizations defend against cyber threats.
- **Key Services:**
 - Threat Data Feeds for real-time updates.
 - Malware Analysis for in-depth insights.
 - Phishing Detection to protect against credential theft.
- **Use Cases:**
 - **Enterprises:** Advanced threat protection for businesses.
 - **Researchers:** Support for academic and security studies.
- **Evaluation Portal Features:**
 - **Anti-Cryptomining Tools.**
 - **Bitcoin Data:** Blockchain strings, transactions, and addresses.
 - **C2 (Command & Control) Infrastructure Monitoring.**
 - **DNS Tools:** DNS-over-HTTPS servers and RPZ firewalls.

- **Integration Feeds:** Compatibility with Fortinet, MISP, PAN-OS, and more.
- **Malicious Indicators:** IPs, malware URLs, hashes, samples, and phishing-related data.
