

Cyber Security
Class No 05(Arabi Sir)
21 Sep 2024

Reconnaissance:

- **OSINT – Open Source Intelligence**

Penetration Testing Methodology:

- [VirusTotal](#) → Use to verify if a crack file contains viruses. Always test a link here before clicking.
 - [Any.run](#) → Conduct a virus check for files.
 - [LeakPeek](#) → Check if your data is publicly accessible.
 - For images, always check the properties first.
-

How to Create a Shared Folder in Kali Linux:

1. Restart the virtual machine.
2. Use the terminal to navigate to the shared folder:
 - Command: `cd /media/sf_JU` (where `sf` represents the shared file; use the **TAB** button to autocomplete).
3. Store the ch9 file in the shared folder manually.
4. Disk file check:
 - Run: `testdisk ch9` → Select Intel → Choose Advance → Select FAT32 → List files.
 - Identify red-colored files, navigate to them using the cursor, then type **C** and repeat until the file is stored in the JU folder.
 - Convert the file into a ZIP archive, extract it, and check its properties.
5. For pictures:
 - Navigate using the terminal:
`cd /media/sf_JU/Files/revendications/Pictures.`
 - To analyze image metadata, use:
`exiftool 1000000000.jpg` (replace with the file name).
 - For coordinates, visit [GPS Coordinates](#).

Example Commands in Terminal:

```
└─(nafishasnatpurplekali㉿kali)-[~]
```

```
└─$ sudo -i
```

[sudo] password for nafishasnatpurplekali:

```
└─(root㉿kali)-[~]
```

```
└─# cd /media/sf_Share
```

```
└─(root㉿kali)-[/media/sf_Share]
```

```
└─# ls
```

ch9

```
└─(root㉿kali)-[/media/sf_Share]
```

```
└─# testdisk ch9
```

TestDisk 7.2, Data Recovery Utility, February 2024

Christophe GRENIER <grenier@cgsecurity.org>

<https://www.cgsecurity.org>

```
└─(root㉿kali)-[~]
```

```
└─# cd /media/sf_Share/Files/revendications/Pictures
```

```
└─(root㉿kali)-[/media/sf_Share/Files/revendications/Pictures]
```

```
└─# exiftool 10000000000000CC000000990038D2A62.jpg
```

Useful Links for OSINT Tools:

1. [OSINT Framework](#) → Quick resource for tools.
2. [Exodus](#) → Analyze permissions for mobile apps (highly useful).
3. [OSINTLeak Dashboard](#) → View user data in detail.
4. **Google Dorking Examples:**
 - intitle:index.of pdf hacking → Search for downloadable files/videos.
 - Use [DorkGPT](#) for advanced searches.

- Example: site:juniv.edu filetype:doc.
-

Tools and Databases:

- [Exploit Database](#) → Resource for exploits.
 - [Polyswarm.io](#) → Analyze large data/files.
 - [Hybrid Analysis](#) → Free malware analysis.
 - [URLScan](#) → Detailed domain and IP info.
 - [Talos Intelligence](#) → Threat analysis.
 - [URLhaus](#) → View and submit malware URLs.
-

Assignments:

1. **Worldwide CCTV Access:**
 - Explore security vulnerabilities.
 2. [Abuse.ch](#) → Explore assignments in six categories.
-

Additional OSINT Resources:

- [Polyswarm Network](#)
- [Metadefender](#)
- [Intezer Analyze](#)
- [Hybrid Analysis](#)
- [Any.run](#)
- [Triage](#)

OSINT Toolkits:

- [OSRFramework](#)
 - [OSINTLeaks](#)
-

AI Platforms Similar to ChatGPT:

1. [Poe](#)
2. [Claude](#)

Interesting Search Queries:

- intitle:"webcamxp 5"
